Overview AutoCAD provides two-dimensional, three-dimensional, and architectural visualization; BIM (Building Information Modeling); and Computer-aided engineering (CAE) functionality. Computer-aided design (CAD) – uses a computer to create, analyze, and visualize two-dimensional and three-dimensional (3D) models. A software tool is used to create the model, which can be edited and/or displayed on a computer screen. The model is viewed and analyzed with two-dimensional and 3D views, and also may be rendered for visualization purposes, such as on a Web page or model-builder-enabled website. Some CAD applications include file-based import and export. Some CAD tools also have the capability to handle data management (DMM) and data interchange (DII) work. BIM (building information modeling) – (BIM is the name of a standard for sharing three-dimensional information.

Computer-aided engineering (CAE) – uses a computer to analyze a CAD model and simulate the design of new products, components, or subassemblies. A free trial version is available that lets users try AutoCAD for 30 days. An annual license is available that allows unlimited use of the software over a 12-month period. There are approximately 20 million active AutoCAD users. The typical U.S. user is male, between the ages of 35 and 50, and works in a firm of 200 to 1,000 employees. History AutoCAD originated from a group of engineers at the University of Illinois at Urbana–Champaign in the late 1970s. They were inspired by a higher-resolution

Integration with third-party software The applications can be integrated to third-party applications (for example, the Open Mapping Project, the OpenVRM application, OpenStreetMap, Wikimapia and other software that provides maps or drawings), but as a system design only the customer can decide which, if any, of the applications are needed. Dynamically linked library In Autodesk Revit Architecture (and Revit Structure), each building's unique configuration can be automatically generated by using the Dynamically Linked Library (DLL) technology. This technology adds a reference library (DLL) to your project. This DLL automatically generates unique data within your project for one or more building types. When your project needs to be saved, a new XML file (Dynamically Linked File) is created to store the unique data. Awards and designations In 2010 Autodesk received the Frost & Sullivan Distinguished Company Award for Customer Leadership. Autodesk received the Ultimate Partner Award for Excellence by The IBM Center for Excellence in 2018. Autodesk received the Financial Services 100 award in 2020.
