You can do a lot with the Pencil, if you had a tool that was reliable and very easy to use with a picture. That's what Apple has done with its products and that's what Adobe is trying to do with Photoshop. Pencil is the first tool to work that way. But the overall Pencil experience is still a bit clunky, and I'm not sure I would buy another one. I started using it because I found myself doing a lot of drawing in Photoshop and wanted an extra tool. After I tried it, I kept using it on my own pictures. It works great with tablets. During the 2016 advertising industry show: Super Bowl 50, I was fortunate to participate in a panel testing multiple tablets and smartphones for "content creation," including edits of Super Bowl highlights. The other week, I picked up a frame the size of a small television at an estate sale. Only it wasn't a television, it was a 35mm film camera that was identical in size to a Canon EOS1V. Sure, the entire thing was made of cardboard, or at least the metal parts were, but it still produced the same sort of results as any 35mm camera. The only thing was the plastic that housed the film holder and spool. Yes, you had to purchase film, and it was costly. Yes, you might be able to find 35mm film in your local camera store, but Digital has become the dominant format on which people store their photos, and something is lost in that transition. With the Spectre, Spectre x360, and the non-x version of the iMac Pro, I think we have a better idea of what this form factor will be used for. At a minimum, I would like to see what will happen if a customer purchased one of these systems with a much larger screen (like a 32-inch display), the same processor as the iMac Pro, GPU suited for game play, and much more stuff.

The first consideration in an edit, is what type of image you may be working on. If you are working on a PNG, you should consider the run length encoding in order to save some space by converting from pixel-based format to a vector-based one. If you are working on a JPEG, bit-depth reduction should also be considered. If you are working on an older format, you should consider to reduce the color depth of the file, for example when working with an 8-bit image. You may even reduce the quality of the image to save as much space as possible. If you are working on a RAW image, it can be transformed into a color space such as Adobe RGB using the Adobe DNG Converter, which should only be done after you have completed your edit. After your edit is finished, it is important to test the image, for example to make sure that the image works well with our preview. This process may include sending the image to a service such as Vecteezy to make sure that your edit renders correctly on a variety of social networks. After the edit is done, it is important to save the image in the format that is appropriate for the publication type, for example, PNG is the appropriate format for a web page, JPEG for a print, and PSD for a print or a company ID card. One of the most important features in Photoshop is the use of layers. The layer is like an organizational layer for your image. A layer can contain: text, line art, patterns, and a whole lot more. Once you have created your images and it is time to create your "card design", you should always check to make sure that there is a design layer above your photograph layers and they are grouped there. As your image is formatted for printing, you should have no problems in saving. If you are creating a web page, you should make sure that the photograph is at the top of the design layers and, if the page is meant to be Mac formatted, you should also make sure that a background item is at the bottom of the layers. When you are finished with your edit, it is important that you are familiar with the "save for web" options. If you are working on a high resolution image for a company ID card or for print, the image will be exported to its greyscale version and a layout will be created in order to show the information on the card. If you are working on a web page, you should either export the image to your web page or if you are working on an online gallery, you should save the image and the elements of the image in order to save space. The best way to make sure that your website is optimally formatted is to export the web page to a PNG.
