Features Key:

An Epic Story

- A Multilayered story told in fragments, shared as opinion and anecdotes of the characters. Players start in a scene of a future that was once beautiful, but the will of destruction and darkness spread.
- A variety of choices and outcomes depending on the stories told. It is the power of these choices that affects the “final” outcome.
- All of the names of locations and items in the game are the names in the

original Agetto Kingdom, and the names of items and passages in the Elder Scroll lore, but have been localized for use in the international Elden Ring.

Megatonous Environments

- Large landscapes and dungeons that have been crafted with rich details.
- A “one more try” type of difficulty that makes players use their skilled mechanical minds to succeed by conquering the difficulty and carefully considering whether they can win.

Story Events that Transcend Online

- A series of events that challenge or reward the players’ efforts or skill.
- Concern yourself with a frustrating or demanding task? Strengthen your character! Complete tasks and improve your statistics to increase your character’s attributes. You can increase the attributes of up to three characters of your character at a time.

A Unique Creative System

- Placing a whole variety of traps of various attributes on-screen to test the players’ intelligence. Examining the conditions created by the traps and deducing the best-appropriate course of action has become the core of player and character skills. The results of player decisions and actions will increase or decrease the conditions created by the traps, which will change the actions of monsters and the environment to never-before-seen results, while exciting and challenging the players.
- Features that support skillful and rewarding actions and decisions that can ultimately bring about high levels of gameplay appeal and shock.

Versatile Party System

-
- In addition to creating your own party, you can select one or more of your party members

████████ all review from 7/2/2016 "Masaya put a lot of effort into making this game and it shows. It is a fun RPG that has a lot to offer. The story is good, the characters are interesting, and the art is beautiful. The gameplay is excellent, and the items and weapons are really rewarding and fun to use. This is the perfect new RPG for when you want a really long and immersive experience. My only criticism is that it is not released yet, and I want it now." █████████★ all review from 7/2/2016 "I'm not sure if this is the best fantasy RPG ever but its certainly fun to play." █████████★ all review from 7/2/2016 "When I first read the description and about the game I really didn't have expectations, but when I started playing it blew my mind. The strengths of our study are its large size, the prospective, multicenter design, and the usage of a validated composite scoring system for endovascular treatment of lower extremity arterial occlusive disease. Our study has several limitations. First, it was designed as a nonrandomized study. In addition, our study included a heterogeneous patient population treated at various centers, and the benefits of endovascular therapy were compared to conventional medical therapy in a study with an open-label design. Moreover, this was a single-arm analysis. A recently published study (*n* = 537) that also compared the effectiveness of endovascular therapy and medical therapy in patients with acute symptomatic intermittent claudication using the full-response analysis suggested that

endovascular therapy may not be more effective than medical therapy \[@B14\]. However, the patient characteristics were different between the two studies and the previous one was a prospective nonrandomized study with open-label design. Another recent study (*n* = 959) that compared the effectiveness of endovascular therapy and medical therapy in patients with critical limb ischemia used the full-response analysis and suggested that endovascular therapy is not more effective than medical therapy \[@B10\]. Furthermore, in that study, full-response analysis was not possible in 34 patients (3.5%). We defined 80% reduction in the ABI as full response and compared it with other studies. In conclusion, endovascular therapy has been performed more frequently since the introduction of DESs. However, in our study, DESs did not improve the primary patency rate at 5 years and exhibited a numerically higher rate of restenosis than BMSs at 1 year,

possibly due to the late introduction of DESs. Furthermore,

.g., $\lambda_t = t^{1/3}$). In this case, any Brownian walk who stays in this set of points would, in the long run, behave as a fBm [bib:paret+poesio]. Such a set of points is called [*ballistic*]{} [bib:mvw]. Another relevant example can be found in a percolation model: when looking at an infinite lattice, there are some sites which can be seen as frozen in the sense that they have only two neighbors, the adjacent ones, and these sites are in all probability always visited. In other words, there is an infinite set of “near-percolating” sites in the lattice. In an uncorrelated medium, these sites are randomly distributed, and if we look at one of these sites, we can find two different paths to this site:
