While Lightroom 5 features several improvements, it's not so much about the old one-click Share for Review feature as it is about the large number of new features. There are no updates to the color accurate functions that are shown in Lightroom's settings. You can never mistake the last update version. Given the fact that Adobe patches security vulnerabilities within a much shorter time than it takes to release Lightroom and Photoshop, I can't figure out what makes updates in the applications so slow. This occurs sporadically. The number of thumbnails shown on a screen can reduce to just five or maybe even four. In the meantime, the thumbnails in the panes above and below that show at a time will be there as well as the panel with the images. It's a bit baffling. I sometimes access the information in the old thumbnails first before proceeding to the panes above and below. GREAT Article. Finally some 'Fatars! I just picked up a HTC U11 and was pleasantly surprised to see LR5 touch up power. My biggest pet peeve with LR3 was the constant deflections and sped up effects when panning. Those are gone in LR5. And frankly I'm about as big a user of LR as they come! I actually prefer to use JuicedUp to create the fix I need to make the image look the way I want. That being said, the best part of all is learning that I don't need to use AfterFX for each and every single touch up since the corrections are just being applied, they are not over applying. When these came out you couldn't tell the difference and I almost feel like I was using AfterFX falsely with LR3. I would dread the thought of seeing all the new AfterFX plugins and wondering what I did wrong!

Known for creating go-to resources, Making of, as well as hundreds of tutorials and videos on the various Adobe Creative Cloud suites, the Adobe Creative Team Blog delivers a consistent flow of new content to the web. Designing web portfolios or web documents with numerous layers? Photoshop Elements is a great option. It's a fully featured photo editing app, and you can use it to give your web designs and HTML templates that professional touch. The software's learning curve is a little steeper than Photoshop, but it gives you access to all of Photoshop's tools, transformations, and effects. It also works with Google's Chrome browser, so you can work across various devices. If you're a mature designer looking for the absolute best in graphics software, Adobe Photoshop is going to be an excellent choice. Photoshop gives you the tools to make anything you can imagine, from everyday transparency editing to photo manipulations, and it lets you compose and produce a wide variety of graphic designs from start to finish, including what's possible with animation and Web-building. However, learning how to use Photoshop is a little more complicated than to use Elements, and overall performance is slightly less smooth. While Photoshop is the king of leading-

edge graphics tools, you may be better off with one of the other applications mentioned here that offer similar features, but without the learning curve. At the same time, the Elements program absolutely delivers. Like Photoshop, Elements lets you retouch photos, but instead of using layers to do the work, Elements uses effects instead. Elements is an online computing program that downloads only when you need to make a change. And the fact that it's built into the browser in macOS and Windows 10 is a great time-saver.

To help you and your team get your campaigns up and running, the newly refreshed Campaign module for Photoshop has a host of new features and improvements. Enhancements include an all-new Editor, new Post Crop workflow, new Framing operation, improved Color Curves of various types and simplified typography for all layers. Finally, a new In-app Flow Designer for user-defined layers is making it even easier to create and edit Photoshop layers. And the always important bug fixes are ongoing. Photoshop CC 2019 has revamped and enhanced our documentary photography workflow with functionality including the ability to seamlessly switch between photos from the same scene. We've expanded the Color Curves workspace to now include Layer Curves that operate on layers as a one-stop editing and re-editing all layers together, providing you with a better workflow than other apps. With a new palette for toning and using contrast for adjustment, creative control has never been so easy. Any normal Apple Mac running macOS 10.14 or later or later, depending on the version of Photoshop, can run Photoshop even though the bundled Graphics Driver for macOS is a third-party driver. However, if you're not using a third-party driver (Asus, Nvidia, AMD, Intel, AMD, and AMD graphics cards can be used), you will see an error message in Photoshop, "MacPaw Graphics Driver not working. To get the Photos App to work correctly, you need to install a MacPaw Graphics driver. Download the latest MacPaw Graphics driver from here." This means it needs the macOS updater to run the macOS 10.14.3. However, in older Macs you will see the following error message in Photoshop: "Hardware Graphics Driver not linking with the kernel." To resolve this error message, please follow the steps to manually find the most recent MacPaw Graphics driver.
