Readers who dismiss the iPad and other tablet computing devices as toys will no doubt be revived by the iPad Pro. Don't be silly. It's much more convenient than a laptop or desktop computer, and it's far easier for everyone to handle thanks to its generously sized 10.5-inch display. Even so, it's certainly no iPad Air, at least not when it comes to performance. For many people, you're probably better off with the new Surface Pro. Yes, it's somewhat bulky, but that's a price to pay for professional performance. Like the iPad Pro, the new Surface Pro offers 8 hours of battery life, Android, and a fast Core i5 processor. In many respects, it even feels more like a laptop, albeit one with a dedicated stylus. It's probably less portable than the iPad Pro, but it's definitely better built than an iPad. "Artists and designers who are reluctant to use a mouse will enjoy Adobe's new Sketchbook app for the iPad. The tablet-optimized graphics editing app offers familiar pen-and-ink drawing tools with the added ability to use your iPad Pro as a fine-grained Photoshop canvas for editing. The standalone app is part of Adobe Creative Cloud and requires the purchase of a Creative Cloud membership (currently \$9.99 per month or \$49.99 annually) for access." "Many modern drawing programs are too limited for fast sketching, and the only one that really succeeds is Adobe Photoshop Sketch (still in beta, with iOS 11 full version expected later this year), which allows you to layer images, paint, draw, and then export what you've drawn as a full Photoshop file. The new pen interface and additional drawing tools are much faster than your typical graphics program, and the familiar Photoshop feel is quite striking."
